## RESEARCH SUMMARY

---

My general research interests are in artificial intelligence (AI) and machine learning (ML) with a focus on Design and Optimization of *Chiplet-based systems* for enabling high-performance computing. The overarching goal of my research is to develop principled AI-driven Design Paradigms in such huge-search spaces for efficient chip design geared towards high-impact applications. Specific topics include:

- Enabling Server-Scale system design with low-latency interconnect networks.
- Knowledge distillation with data-flow aware high-performance computing for Large Language Models.
- Design of high-performance and energy-efficient manycore systems to overcome Moore's law.
- Defect-aware integration using chiplet-based systems to reduce carbon footprint at scale.
- Accelerating the design of robust, reliable, and environmentally sustainable paradigms.
